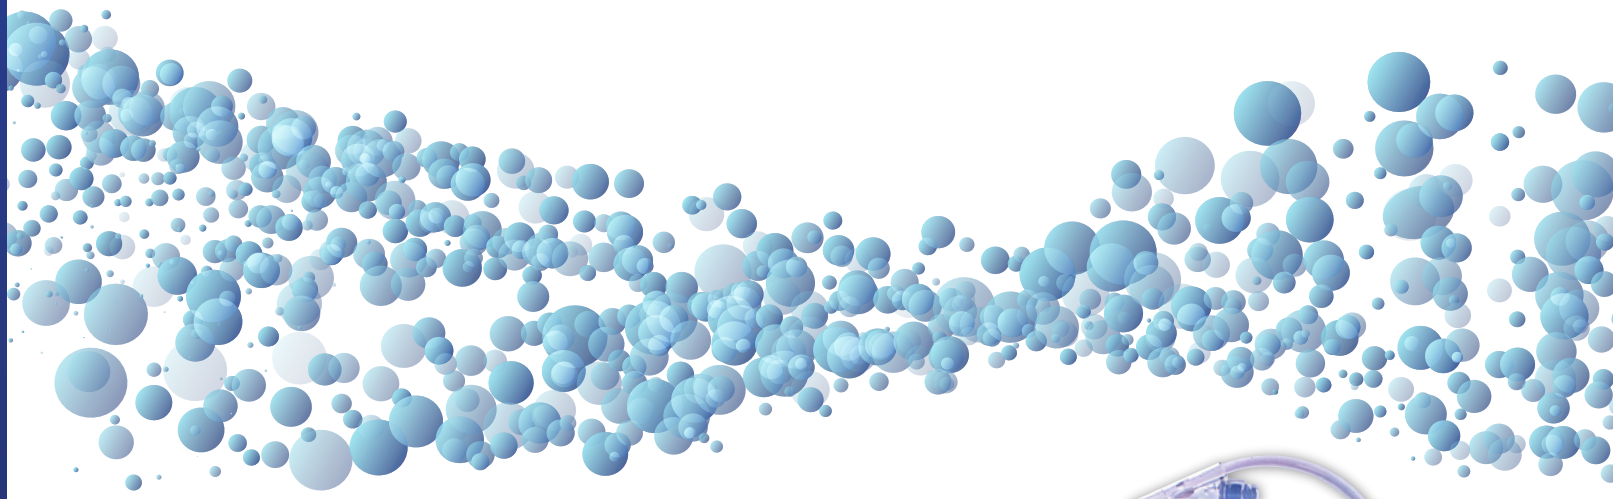
# CRYOSTORE 25 FREEZING BAG

The OriGen Biomedical® CryoStore 25 Freezing Bag is intended for freezing blood components.



*It provides you with the traceability and durability that you need.*

## ALIQUOTS - MATCHED BAG AND TUBE PRINTING

The **CRYOSTORE** 25 Freezing Bag has a printed number on each chamber for easy identification. The numbers on the chambers match the pre-marked printed segments, which hold approximately 100µl of cell product. This can aid in tracing aliquot samples to the bag.

## DURABILITY- BETTER MATERIAL, PROVEN PERFORMANCE

The OriGen Biomedical **CRYOSTORE** Bag is the industry-preferred cryogenic freezing bag. The hermetically sealed spike ports and film used in every **CRYOSTORE** bag are made from a robust EVA.

## NEEDLE-FREE INJECTION PORT

The "N" tubing set has luer-actuated needle-free injection ports. These swabable ports maintain sterility of the sample through numerous actuations (white paper available) and can eliminate the possibility of needle sticks.

## EASE OF USE - BUILT-IN

The donor tube is intentionally placed in the corner of the bag for easier debubbling and sealing. OriGen can provide the **CRYOSTORE** 25 Freezing Bag with one of several stock or special order tube sets to fit your processing needs. The tube sets may include SCD weldable tubing, needle-free access, male luer connections, and/or female luer connections.

## EFFICIENCY

The chambers are filled from a single location, and the channel located at the bottom and top of the bag allows for easy heat seals between each chamber with a standard tube sealer. The separation of the individual chambers allows for easy separation of the cell product and quality sample.

## OUR QUALITY STANDARDS

A Certificate of Conformance (CoC) is included with each **CRYOSTORE** 25 Freezing Bag. OriGen Biomedical **CRYOSTORE** 25 Freezing Bags are CE marked and FDA 510(k) cleared. OriGen is certified to ISO 13485:2016, MDSAP certified, and all products are manufactured to GMP guidelines.
